Outsourced Software Development & IT Solutions

WHAT

HOW

WHY

01

What we offer

We are a **Latam-based technology services company** that specializes in providing **outsourced software development** and **IT solutions** from our nearshore delivery center for multinational clients.

Our primary focus is to be your **leading partner** in Latam, strongly oriented to building a long-term rapport providing technical support and a high quality engineer team to your company or project. In addition, to build a network of referrals to develop new business & projects that will mutually benefit both parties.

Projects

A fully-managed team, operating using several technologies and agile best practices.

Tech teams

Assemble a full team, ready to follow your lead.

Freelancers

Fill a missing skill set or role on your engineer team.

Private Money Club

The Challenge

Private Money Club represented a beautiful challenge for our team. Client requested a clean up of their previous website and an improvement of the look and feel as well as the overall user experience.

In addition, they wanted the creation of a brand new, limited in scope but scalable mobile app connected to their website. The result for this project was a renewed UX/UI based on an Information Architecture research made by professional of Design.

Our Solution

We worked improving their **WordPress** site updating the current plugins, improving the front end using elementor and creating custom code and widgets for custom requests from the client. Moreover, mobile app was entirely created using **React Native**

Technologies

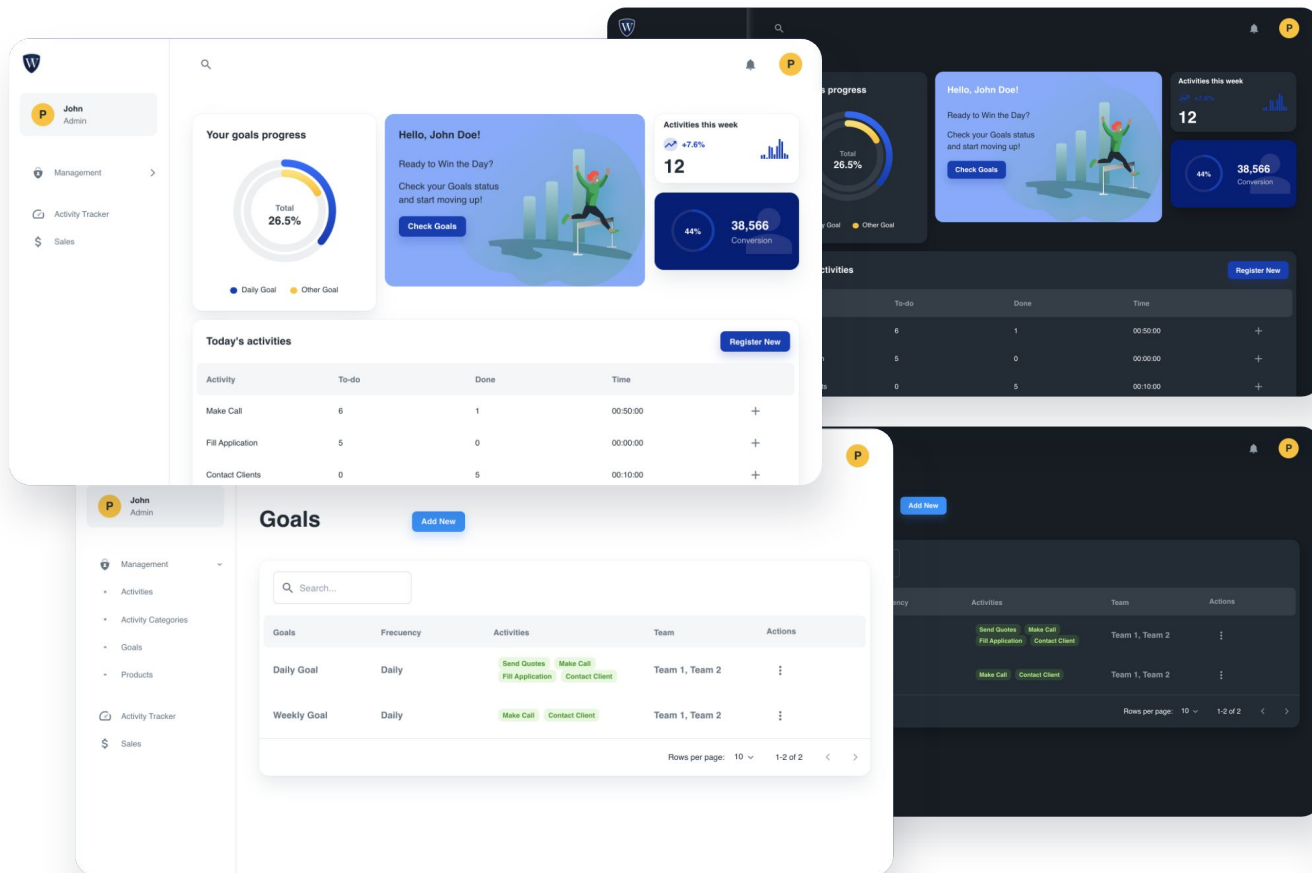

Backend: PHP / Wordpress

Front-End: React native

Light Mode

Dark Mode

The Challenge

WSA is an insurance tracker built entirely from our team, we were in charge of providing a sales tracker and bonuses for the entire team.

Our Solution

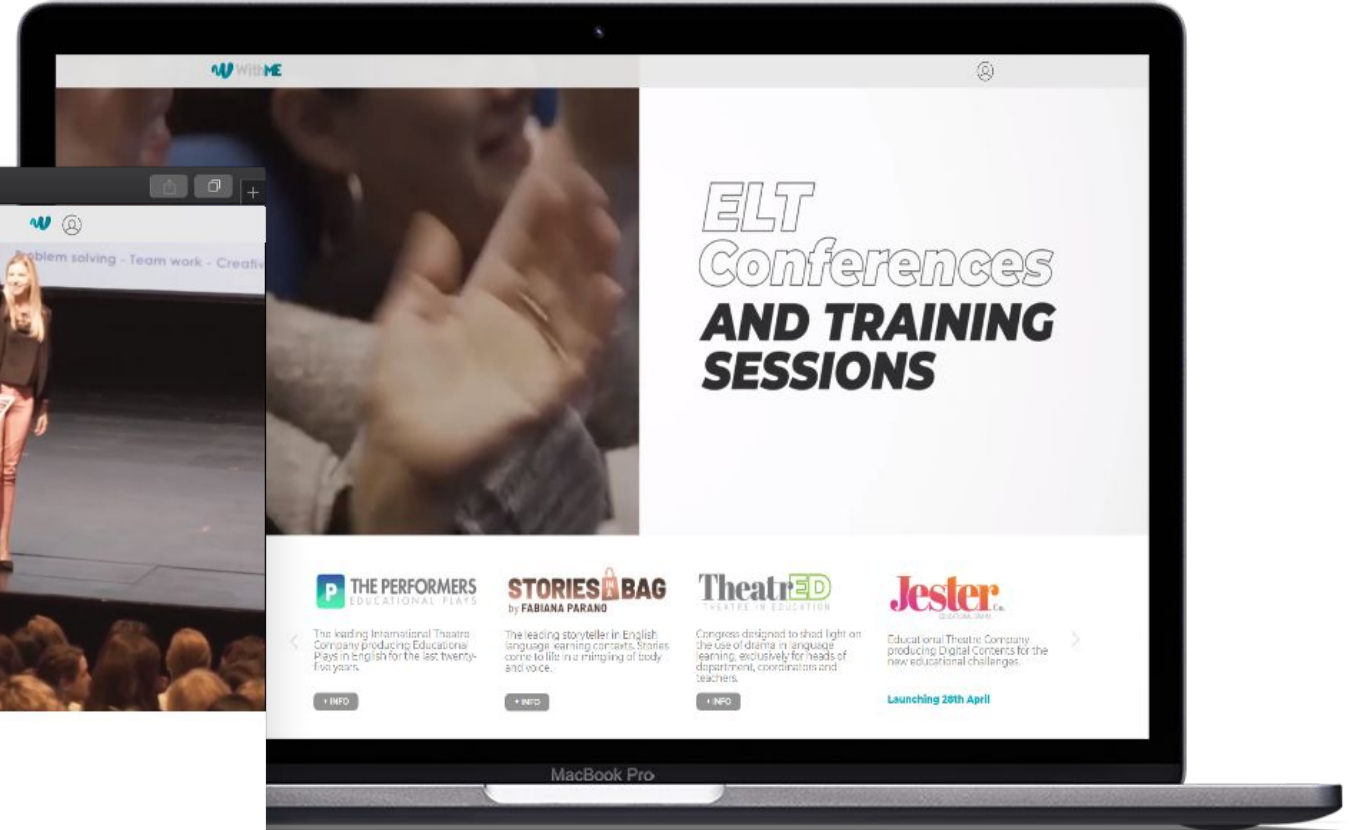

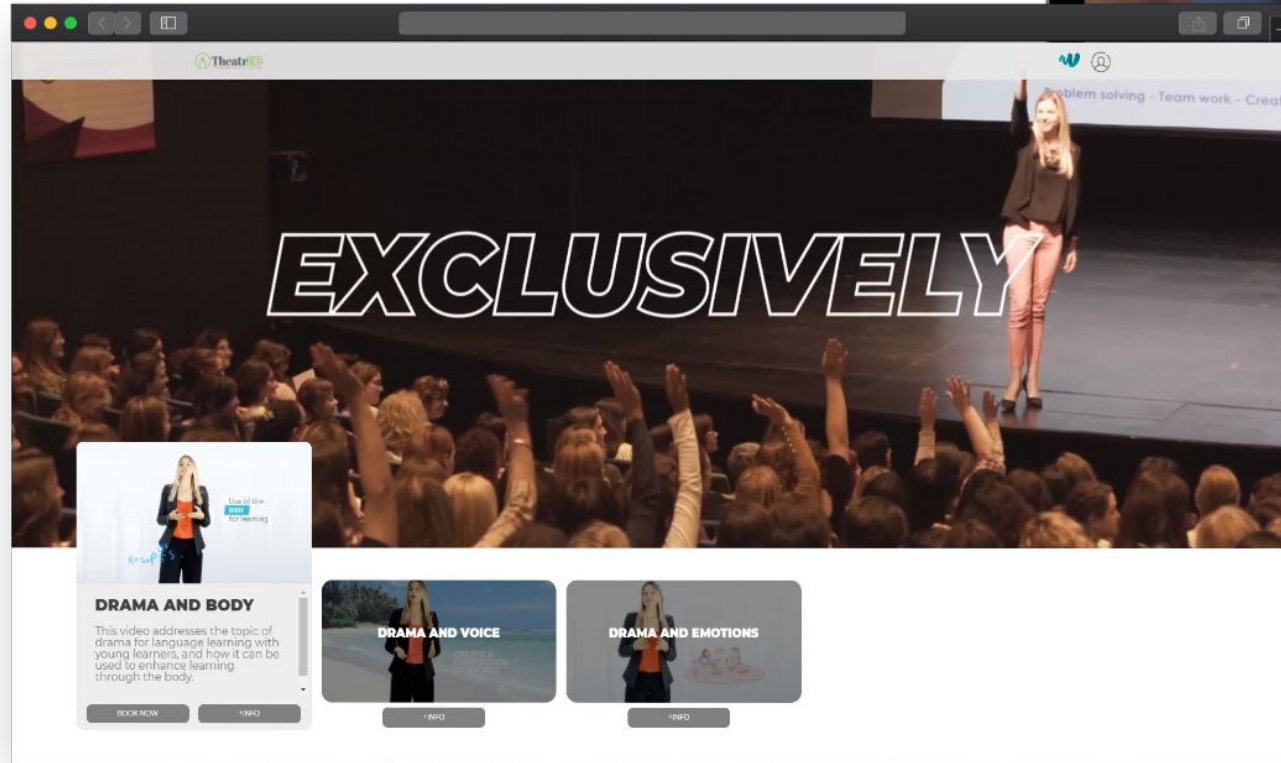

We worked this project using latest technologies and best practices, building custom code and taking advantage of micro services built both on ruby on rails and NodeJS

Technologies

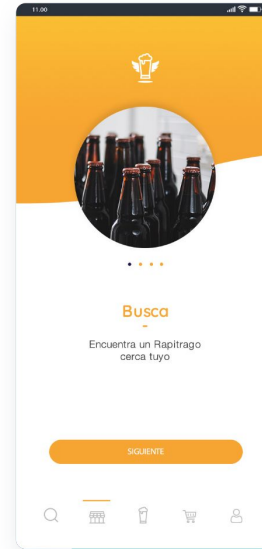

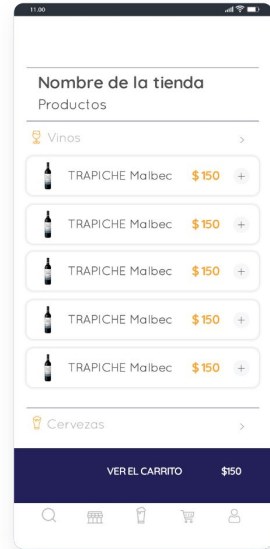

Backend: Ruby on Rails + GraphQL + NodeJS

Front-End: React

RapiTrago App

The Challenge

Generate an innovative way to order your drinks and products online.

Our Solution

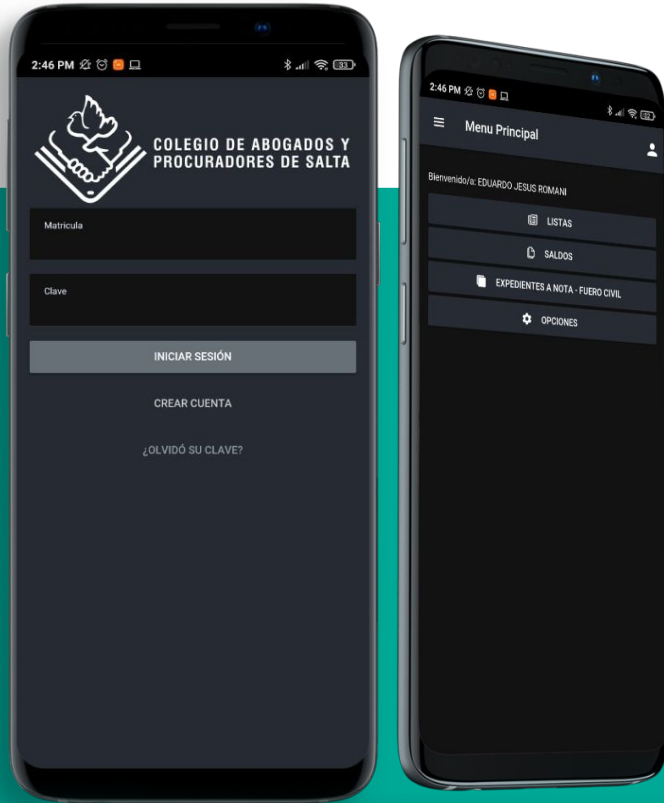

We build an APP for Stores to provide products, and customer to place an order and pay.

Technologies

Backend: Ruby on Rails / PHP

FrontEnd: React native / TypeScript / Redux Toolkit.

Colegio de Abogados de Salta

The Challenge

Provide Law Associates with follow up for trials and payments.

Our Solution

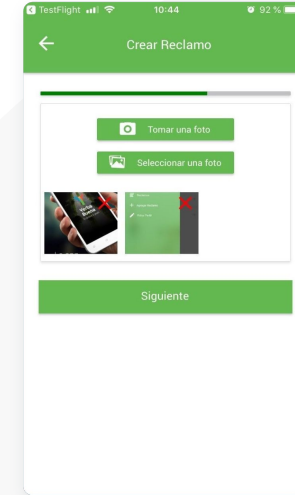

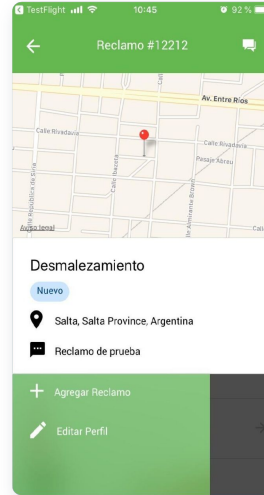

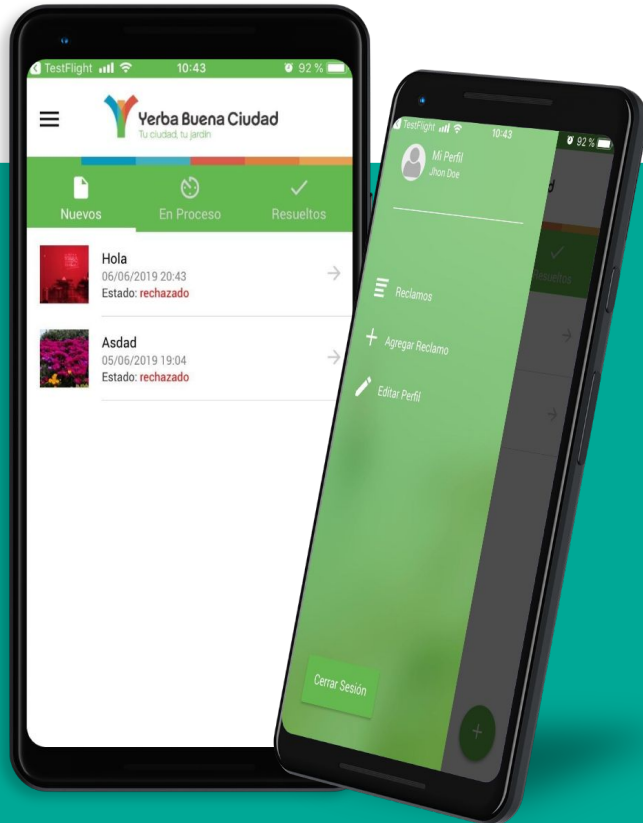

We built an APP that allows them follow up their trials, payments and notifications in the simplest way.

Technologies

Backend: Ruby on Rails

Front End: React native

Yerba Buena ciudad app

The Challenge

The City of Yerba Buena needed an simple and direct way to communicate with his citizens and receive feedback and claims for a fast solution and management.

Our Solution

We built an APP that allows them to send claims, with photographs, geo location, follow up and chat.

Technologies

Backend: Ruby on Rails

Frontend: React Native / Expo.
